# Timeline bar

Not to be confused with the [Seasons timeline](#), this animates growth. There are simple Stop, Play and loop settings, animation duration times & a link to the growth wizard.

Some modeling features are unavailable or unstable during growth. These features and the actions that will be taken are listed below.

Bifurcation: Will be disabled.

Branch Weld Style: Will be set to 'Growth friendly'.

Alignment (spine, leaf, and generation): May cause artifacts, will be disabled.

Jaggedness: Will be disabled.

LOD: Highest LODs will be set to keep all geometry.

Segments: Optimization will be disabled and radial segment profiles will be set to 'max'.

Radius style: Will be set to 'relative'.

V Tex coord tiling: Profile curves will be set to 'max'.

Leaf Collision: Will be disabled.

These actions may significantly change the model (you can address each of these issues manually if you choose not to proceed).
